

Month 1: Purple Teaming Batch 01

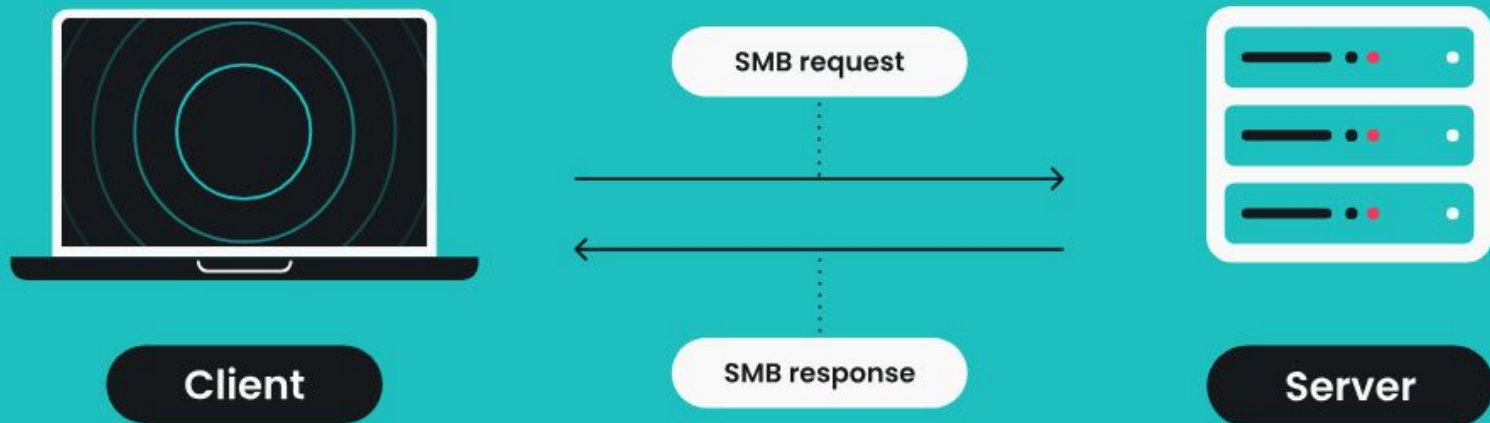

Network Security & Protocol Analysis

Week 4: Lateral Movement & Internal Network Attacks

Instructor: **Muhammad Saad**

SMB (Server Message Block)

A protocol that allows users on the same network to share files, access resources like storage and apps, and communicate.

SMB Shares

SMB shares are **folders, drives, or resources on a computer or server that are made accessible over a network using the SMB protocol.**

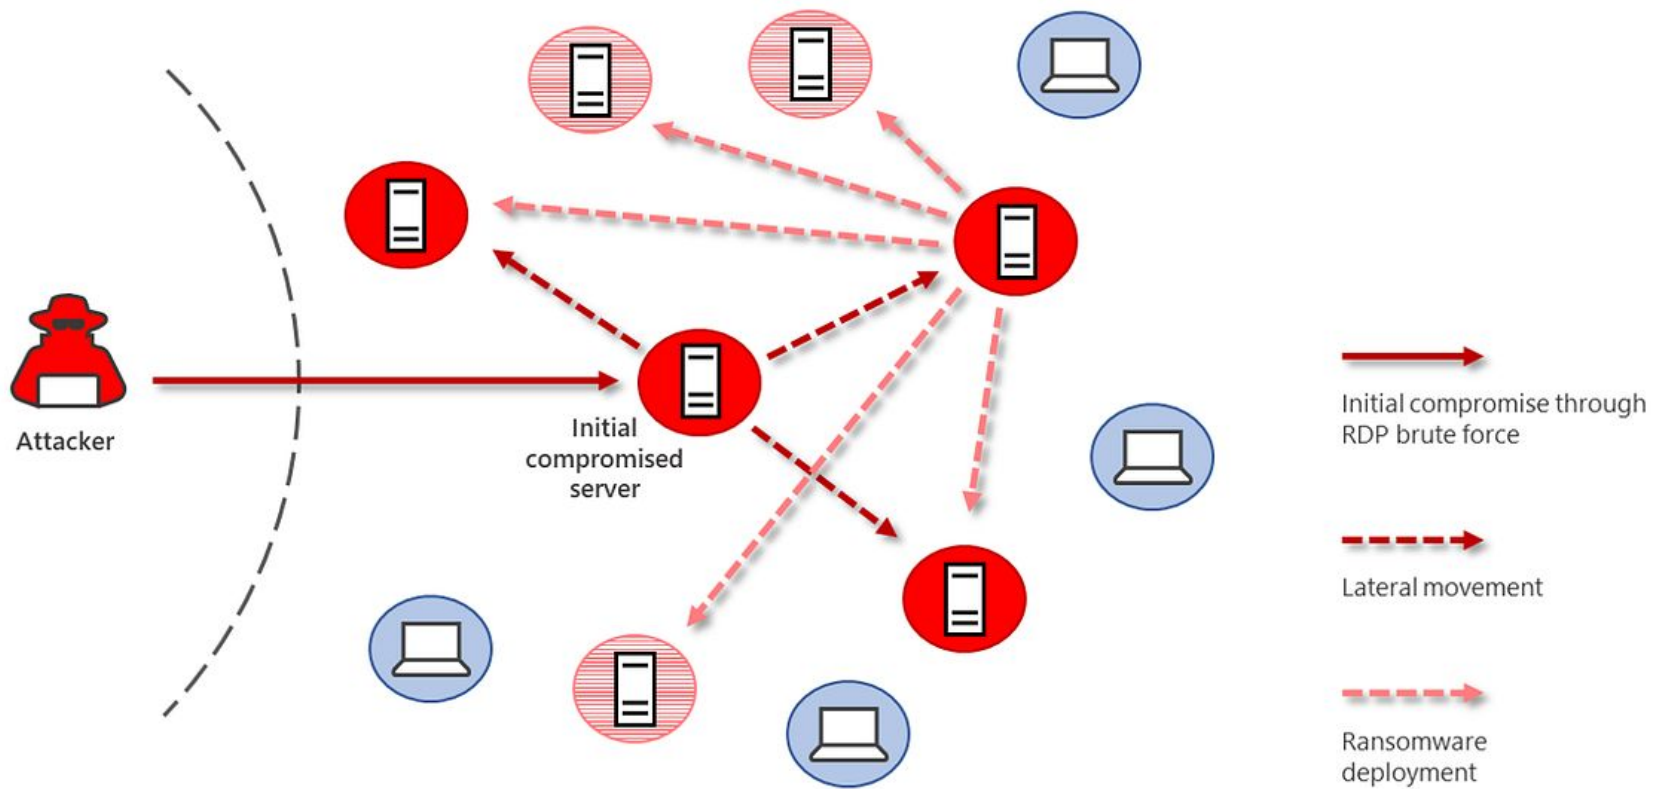

An SMB share lets other users on the network:

- Open files
- Save documents
- Access folders
- Use shared resources

It's like turning a local folder into a **network-accessible folder**.

Example:

- Suppose a computer shares a folder called: ***C:\Projects***
- It might be accessible on the network as: ***\\Office-PC\Projects***

Best of Luck for the Week 4 Tasks
